Fleet-Management

Fleet Management Mobile Application

UI/UX Design Documentation

Name: Tejas Dombe
Assignment No.: 7

PART 1: SYSTEMATIC UI FLOW

User Flow:

Login → Fleet Dashboard → Select Vehicle → Vehicle Detail → Take Action (Call / Alert) → Alerts & Issues → Profile & Settings

---

Fleet Logo / Splash Screen

Purpose:
To introduce the application and allow user entry into the system.

Contains:

- Application Name: FleetFlow
- Tagline: Smart Fleet Monitoring System
- Get Started Button

Design Features:

- Dark professional background
- Corporate Blue & Teal color theme
- Clean centered layout

Dashboard Screen

Purpose:
To monitor the entire fleet in one glance.

Contains:

- Overview Statistics:
    - Total Vehicles
    - Active Vehicles
    - Delayed Vehicles
    - Critical Issues

- Real-time vehicle list (6 trucks displayed)
- Color-coded status indicators:
    - Green – Active
    - Orange – Delayed
    - Red – Breakdown
- Fuel percentage
- Current speed
- Route information
- ETA display

User Actions:

- Select vehicle
- Navigate to Live Tracking
- View Alerts

Design Approach:

- Card-based layout
- Clean spacing
- Clear hierarchy
- Corporate SaaS-style interface

Vehicle Detail Screen

Purpose:
To provide detailed monitoring and quick decision-making for a selected vehicle.

Contains:

Vehicle Information:

- Vehicle ID (MH12AB1234)
- Driver Name & Contact
- Status (On Route / Delayed / Breakdown)

Trip Information:

- Source Location
- Destination
- Distance
- ETA

- Start Time

Live Metrics:

- Speed
- Fuel Level
- Engine Temperature
- Route Progress
- Driving Time

Vehicle Health:

- Last Service Date
- Next Service Due
- Health Status Indicator

Action Buttons:

- Call Driver
- Report Issue

Design Features:

- Structured information grouping
- Highlighted critical alerts
- Color-coded health indicators
- Clear decision-making buttons

Alerts & Issues Screen

Purpose:
To ensure immediate response to operational problems.

Displays:

- Critical Alerts:
  - Engine Overheat
  - Breakdown
- Warning Alerts:
  - Low Fuel
  - Route Delay
- Severity Indicators (Color-based)
- Time reported

- Action Buttons:
  - Request Towing
  - Notify Customer

Design Considerations:

- Red background for critical alerts
- Yellow for warnings
- Clear visibility and quick action priority

Profile & Settings Screen

Purpose:
To manage user account and system preferences.

Contains:

Profile Section:

- User Name
- Role (Fleet Manager)
- Company Name

Account Information:

- Email
- Phone Number
- Employee ID

Notification Settings:

- Engine Alerts
- Fuel Alerts
- Trip Updates

Security Settings:

- Change Password
- Two-Factor Authentication

App Preferences:

- Theme Selection
- Language

Logout Button

Design Approach:

- Organized card sections
- Clean layout
- Emphasis on usability

PART 2: DESIGN PROCESS

Empathize

Research was conducted to understand the needs of:

- Fleet Managers
- Logistics Coordinators
- Operations Supervisors

User Needs:

- Monitor multiple trucks simultaneously
- Track real-time vehicle location
- View delivery status and ETA
- Receive instant alerts for breakdowns
- Make fast operational decisions

Pain Points:

- Difficulty tracking many vehicles
- Poor alert visibility
- Slow breakdown response
- Complex, cluttered dashboards

Define

Problem Statement:

Fleet managers need a simple and intuitive mobile dashboard that allows them to monitor vehicle location, health, and delivery status in real-time so they can reduce delays and respond quickly to operational issues.

Design Goal:

To create a clean, structured, and professional fleet monitoring interface that prioritizes clarity, real-time visibility, and fast decision-making.

Ideate

Multiple layout concepts were explored.

Key Design Decisions:

- Dashboard combining statistics + vehicle list
- Card-based modular layout
- Color-coded status system:
  - Green = Active
  - Orange = Delayed
  - Red = Critical
- Quick action buttons for immediate response
- Minimal clutter, maximum clarity

The focus remained on logical flow rather than adding unnecessary features.

Prototype

Low-Fidelity Wireframe:

- Basic structural layout
- User flow planning
- Information hierarchy mapping

High-Fidelity UI:

- Designed using Figma
- Applied Corporate Blue–Teal theme
- Used consistent spacing & rounded cards
- Implemented color-coded alert system
- Added realistic vehicle data
